HOW TO FIT SLIDING DOORS
Assembly Instructions

TOOLS REQUIRED:

1. Measure the width at the top and bottom of your opening.
2. Mark this on your top and bottom track sets minus 2mm (taking off 2mm allows for an easier fit). Cut the tracks.

1 - Screw top track to ceiling, using equal spacing.
2 - Position bottom track on the floor. (Do not fix yet).

Please check your opening for any hidden electrical wires and water pipes before / screwing.

Screws not supplied. Use suitable screws and plugs.

All doors are made to suit an opening height of 2277mm.
A higher ceiling needs to be reduced ensuring the opening is level and squared up.
Not suitable for bathrooms.

Insert door into back channel of top and bottom tracks.

Position door on both sides of the track and level up. (Do this by moving the bottom track). Mark the floor once in position.
For all track types, measure in 100mm from wall and then space out evenly across the length of the track (approx 500mm).

After marking where the drill holes will be, drill through the track into the floor. Fix by screwing into the floor using suitable fixings. (You can use ‘double sided foam tape’ to secure bottom track if preferred).

Adjust the bottom wheels using a screwdriver, altering the height and angle of each door to suit your space. Turn the screw clockwise to raise the door and anti-clockwise to lower the door.

Ensuring your floor is level. If it isn’t, you may require additional material under & along the entire length of the floor track to level it up.

Remove the door.

Re-insert door. Make sure to fit the back doors first.

Repeat steps 7 & 8 on all doors to complete the wardrobe.
