

## SNK1010

## TAP HOLE REMOVAL

- Remove sink from packaging and support under the edges.

- Check the indicator to make sure you have selected correct handed hole.

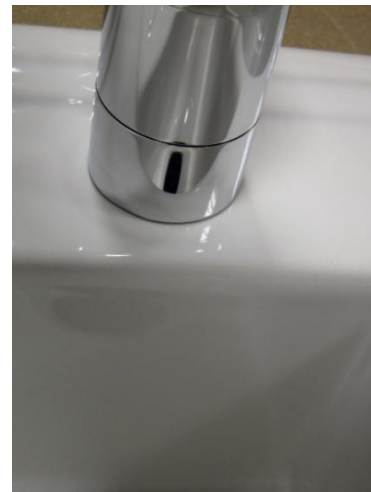

- Using a centre punch, chisel or sturdy instrument carefully hit the sink on the marker indicated; *this must be from the top glazed surface.*

- When the tool has made a small hole, carefully chip away until the hole is the correct size.

- When hole is finished the tap when fitted will cover any small irregularities.
