

Mirror Chip Laminate Worktop

Important Care Information

Care should be taken when handling the Mirror Chip laminate worktops particularly after cutting has taken place as the worktop cut edge could be sharp.

The sharpness of the edge can be removed by using a 240 grit sandpaper with sanding block or an engineers file, making sure care is taken not to damage the worksurface.

Under no circumstances should fingers or hands be run along the raw cut edge until the sharpness has been removed.
