

Care and Maintenance of Howdens Oak Veneered Internal Doors

Internal doors do not require ongoing maintenance like external doors as they are not subjected to the same environmental conditions

A maintenance coat of the varnish or stain to refresh the finish of the door will be required as and when the finish dulls and/or the door receives any knocks, dents or scratches

We strongly recommend you follow the varnish or stain manufacturers instructions for maintenance and re-coating the door as the process may vary between manufacturers

If using Howdens Sadolin Interior PU Varnish or Sadolin Interior Stain ask the depot to print a copy of the technical data sheet which will include care and maintenance advice

Dusting the door (without polish) and cleaning any dirty marks with a damp cloth (not wet) will be enough to keep the door looking fresh in the interim period. Do NOT use harsh chemicals or abrasive substances to clean the door.
